

Why we use **Emu Oil** in all of our products:

Emu oil was discovered by the Australian Aborigines to be an excellent source for healing. Science has discovered that Emu oil is rich in Omega-3 and Omega-6 essential fatty acids. It is non-comedogenic (it doesn't clog pores like most oils); it is a natural anti-inflammatory; it is a deep penetrating trans-dermal carrier, meaning it deeply penetrates the skin layers; it penetrates quickly; it is a natural moisturizer; it aids in cell regeneration; it reduces wrinkles; it retards scarring; it favorably impacts the human immune system; it is hypo-allergenic and bacteriostatic; and it is odorless.

Being rich in so many ways, we found that adding Emu Oil to our products increased their effectiveness and created a synergistic benefit that positively impacted other ailments and maladies.

The main “key” point is.... This is a **Transdermic Oil**.

What does transdermal mean? - Transdermal means that it *penetrates* the outer layer of the skin, *which allows the EMU OIL and the other ingredients to reach deeper than just the skin's surface*.

This is an oil that can be taken internally as well as externally. This oil works on the entire body, anywhere you put it. Will heal anything anywhere.

Emu Oil is known as the anti-aging emollient.

- **Emu Oil** is a deep penetrating, anti-inflammatory, non-irritating, highly moisturizing, all natural nutritional supplement for your skin.
- It is hypo-allergenic, giving it a low potential for irritating the skin. Emu oil doesn't clog pores. It contains essential fatty acids required by the body. Topical application of emu oil delivers these nutrients deep into the skin to support healthy cell growth. Emu Oil is an excellent emulsifier and does not leave the skin feeling oily or greasy.
- Pure Emu oil soothes the skin after serious or minor burns and cuts. Burning and itching are instantly soothed. Healing takes place more rapidly because emu oil has healing properties and does not cover the skin with a petroleum type air barrier. It allows the skin to breathe and heal.
